## dataSOFT Reports Wizard

For end users that require the ability to reconfigure existing or add new reports, Contec Systems has the answer—dataSOFT Reports Wizard.

This major milestone has been achieved by listening to what our customers want—a way to change their reports by themselves.

Now, along with Contec Systems' field proven flagship product dataSOFT Suite, there is dataSOFT Reports Wizard.

The Wizard provides you with the ability to reconfigure/modify, add to, or delete from, any of your Data Acquisition and Handling Software (DAHS) reports.

The Wizard has many features and options that allow you to modify your system's environmental reports.

In addition to standard reporting features such as column averages and totals, reported information may also include user free-formatted equations. Choose from the built-in library of standard environmental and repeatedly used equations.

By using a point-and-click approach to easily retrieve an equation from the Wizard library, the Wizard steps you through the process of developing an equation that will report the data in the selected column .

Standard System reports include:

- Daily Alarm reports
- Daily, Monthly, and Annual Process and Emission reports
- Daily, Monthly, and Quarterly Calibration reports
- Daily 6 minute Opacity
- Quarterly and Semi-Annual 40 CFR 60.7 (EPA) reports including detailed excess emissions and monitoring downtime periods
- Monthly and Quarterly Availability reports
- Daily, Monthly and Quarterly Invalid Data Incident reports
- Daily, Monthly and Quarterly Excess Emission reports
